

TRACKMAN BASELINE ASSESSMENT

It all starts *with the benchmark.*

Twenty iron shots on TrackMan, 50 to 175 yards. Analyzed in the bay by professionals Michael Graci, PGA or Chris Wiatr. You leave knowing where your strokes go, with a baseline for where to improve your game.

COMPLIMENTARY With every tour

1

Set the benchmark

Your handicap sets the targets and the pins, so the test fits the golfer you are today.

2

Find the strokes

Every target is a circle sized to the shot. **Inside it, you beat the benchmark.** Outside it, you give a stroke back. No two targets repeat.

3

Know your next move

A written report within 24 hours: where you gain strokes, where you lose them, and what to work on first.

WHY IT MATTERS

On a range, every ball feels the same and none of them count. Here every shot is scored with **Strokes Gained**, the measure the PGA Tour uses for its players, against tour pros or a handicap benchmark. **The data does not lie.** Nothing is assumed or felt. These are cold, hard facts, and they are the baseline you improve from.
